

Product description

fiber channel is according to foreign advanced fiber cable management concept, fully consider the rapid development of domestic fiber communication business and the importance of fiber routing management, our company push a new fiber cable management system, which aims to provide wiring frame to the optical transmission equipment of optical fiber channel groove and cover plate made of PVC, ABS flame retardant material, accessories and accessories cover plate made of ABS flame retardant material, protect fiber corrugated hose main component is polypropylene (PP).

The flame retardant performance of all plastic parts reaches the FV-0 level in GB / T2408-2008, ensuring no toxic gas production in extreme environments.

Fiber channel with yellow color, color mark: Pantone123C main technical indicators and advantages of enclosed structure, fully protect the fiber from damage subject using flame retardant engineering plastic, smooth surface, beautiful style ensure fiber radius of curvature 40mm in addition to provide fixed fiber outlet, and active fiber optional, can meet the equipment room equipment expansion needs reliable connection, fixed ways, can use hanging installation, bottom support installation, or other bridge fixed installation according to the need can provide fiber storage function, and meet the needs of changing direction

Introduction

1. Fiber duct is a system designed to protect and route fiber optical patch cords, cable assemblies from network cabinet, ODF and other devices.
2. Fiber duct offers ideal solutions for optical raceway requirements and applications with elegant appearance and easy maintenance.
3. Flame-retardant materials rated GB/T2048-2008 FV-0.
4. Materials: 1) Straight Sections: PVC, 2) Other Plastic Parts: ABS
